

# Subject index

- actin 247-255, 310-312
- actin, sperms 97
- activation period, pollen 247
- Agapanthus* 57-63, 138-145, 163-168
- Agrobacterium* 102, 103, 107
- allele specificity 4
- Allemanda* 27-33, 182-188
- Allium* 72-78, 79-85
- Allomyces* 310-312
- alloplasmic cms analogs 13-26
- amino acid identity, S-alleles 261
- amino acid sequences, S-proteins 259-260
- amyoplast zone, pollen grain 249
- Anacardium* 264-269
- andromonoecy 264-269
- anther dehiscence 287
- anther development, metabolic products 115
- anther mucilage 298-303
- anthesis 118, 121, 123, 124, 125, 126
- antimycin staining 95
- antipodial embryony 79-85
- anti-tubulin labelling 67
- apertural hemisphere, pollen grain 252
- apical nipple 276
- apomict, pseudogamous 79-85
- association generative-vegetative cells, pollen grain 176-179
- ATPases, role during pollen germination 138-145
- Brassica* 101-109, 280-285
- calcium changes, during microsporogenesis 214-223
- calcium distribution, synergids 34-46, 154, 206-213
- calmodulin level, during microsporogenesis 214-223
- cDNA, S-allele 256-263
- cell cycle, embryogenesis 189-194
- chemotropism, pollen-tubes 47-56, 201-205
- chromatin, condensed, pollen nucleus 270-274
- CTC fluorescence during pollen germination 220
- Cymbidium* 169-181
- cytochalasin treatment, pollen-tubes 90, 95-96
- cytoplasmic channels, pollen tetrad 171
- cytoplasmic diminution 169-181
- cytoplasmic male sterility 13-26
- cytoplasm transfer 280
- cytoskeleton, cage, interphase cells 187
- cytoskeleton, pollen grain 247-255
- cytoskeleton, sperm cells 89-100
- cytoskeleton, generative cells 64-71
- detachment mode, generative cell 131-137
- diplospory, degree 72-78
- DNA content, suspensors 146-150
- DNA gel blot analysis 102
- DNA replication in generative nucleus pollen 189-194
- egg apparatus 37
- electrotropism, pollen-tubes 57-63
- embryo abortion 199
- embryogenic induction, pollen 190
- embryo-sac formation 72-78
- embryosac isolation 157
- endoreduplication, embryo-sac 72-78
- energy-dispersive X-ray microanalysis, ovaries 35
- endosperm formation 82
- exine, pollen 248
- F-actin, generative cells 89-100
- female fertility 282, 284
- female gametophyte irradiation 280-285
- female germ unit 156-162
- female meiosis, embryosac 72-78
- female stroboli, micropylar drops 278
- fertilization ability, pollen 289-290
- FITC probe 310
- floral display 239-245
- flower morphogenesis 13-26
- fluorochromatic reaction 151, 153, 288
- gametangia, differentiation 310-312
- gametophytic self-incompatibility 256-263
- Gasteria* 214-223
- gametophytic selection 286-291
- generating new S-alleles 262
- generative cell, formation 131-137
- generative cell pollen-tube, isolation 27
- generative cell, pollen, isolation 270-274
- generative cell wall, formation 132, 135
- generative cells, isolation 27, 182-188, 270-274
- genetic transmission of regeneration potential 295-296
- genomic DNA, incompatibility 258
- germination capacity, pollen 289
- Gossypium* 117-127
- hybrid suspensors 147
- hydration, pollen 56, 163-164, 167, 247-255
- hydrodynamics, pollen-tube growth 163-168
- Hydrophyllum* 239-245
- immature embryos, in vitro culture 281
- immunolocalization actin 90
- inducer proteins, purification 9
- integration, stable, of genes 103-104
- interspecific hybridization 146-150
- interspecific hybridization, barriers 195-200
- intine, pollen 248
- in vitro flowering, wheat 288
- in vitro pollination 227-231
- ionic distribution along the style 63
- ionic distribution in germination plate 60-61
- ionic gradients, pollen-tubes 138-145
- irradiation gametes 280
- isolation generative cells, pollen 65, 270-271
- isolation of immature pollen grain 304-305
- lipids, in pollen 110-116
- low temperature, effect on pollen competition 128-130
- Lycopersicum* 128-130, 256-263
- male germ unit 169-181
- male meiosis, *Allium* 77
- Malus* 232-238
- megagametophyte 156-162
- Melandrium* 86-88, 292-297
- membrane calcium, sporogenous cells 214-223
- mesophyll protoplasts, culture 293
- microfilaments, generative cells 89-100
- micropylar drop, chemical composition 275-279
- microsporogenesis, gene expression 304-309
- microtubules generative cells 64-71, 182-188
- microtubular organization 27-33
- mitochondria, localization of Ca-ATPases 138-145
- mitochondrial protein synthesis 22
- monensin, effect on pollen-tube growth 233
- motility, generative cells and sperms 89-100
- motility, intracellular, pollen 250, 253
- MtDNA analysis 17
- myosin, localization 90
- Nicotiana* 13-26, 64-71, 92, 93, 94, 96, 151-155, 156-162, 189-194, 304-309
- nucellar apex 275-279
- nucleotide sequences, S-allele 258
- Oenothera* 110-116
- organelle movement in embryo sacs 156-162
- organelle volume, pollen 166
- osmotic activity, pollen, determination 271
- outcrossing rates 241-242
- ovarian chamber 151
- ovarian chemotropically active fraction 54
- ovule collapse, interspecific hybridization 197
- Papaver* 1-7
- parthenogenesis 79-85
- PCR, Y-chromosome 86-88
- Pennisatum* 34-46, 47-56
- Petunia* 262
- Phaseolus* 146-150
- phenotypic analysis of transgenic plants 105-106

- Phoenix* 270–274  
 pistil RNA 259  
 pistil diffusates 49, 201–205  
 plant transformation vectors 101–102  
 pollen availability 298, 302  
 pollen bioassay 48–49  
 pollen chamber 267–277  
 pollen, chemical composition 266–267  
 pollen competition 128–130, 268  
 pollen embryogenesis 189–194  
 pollen germination 247–255  
 pollen germination medium 48–49, 58, 163, 190, 201–202, 215, 232–233, 287, 305  
 pollen grain, 3-D reconstruction 172–173  
 pollen, hydration 56, 163–164, 247–255  
 pollen maturation 117–127, 291  
 pollen maturation, in vitro 286–291  
 pollen mixture 268  
 pollen populations, characteristics 287, 289  
 pollen proteins 5  
 pollen response genes 5–6  
 pollen response, on monensin 236–237  
 pollen shedding 298–303  
 pollen-tube directionality 47–56, 57–63  
 pollen tube discharge 211  
 pollen tube growth, abnormalities after interspecific growth 198  
 pollen tube growth in maize silks 227–231  
 pollen tube growth, kinetics 163–168  
 pollen tube pathway, in vivo 50  
 pollen tube response to calcium 53  
 pollen tube, structural organization 166  
 pollen tube wall proteins 234–236  
 pollen, vacuole compartment 166  
 pollen viability 289  
 pollen vigour 264–269  
 polyembryony 84, 224–226  
 polysaccharides, in pollen 110–116  
*Polystachia* 131–137  
 pore region, pollen 164  
 P-particle zone, pollen grain 249  
 protandry 239–245  
 protein immunoblot analysis 103  
 protein secretion, pollen tubes 232–238  
 protein synthesis, during in vitro pollen maturation 304–309  
 protoplast isolation 293, 294  
 receptivity, synergids 154–155  
 regeneration capacity, dioecious plants 292–297  
 rehydration, pollen 167  
*Rhododendron* 94  
 ribonuclease, incompatibility 3–4  
 S-alleles, generating new 262  
 secretion mycopylar drops 278  
 selective prevention of female gametangial differentiation 311  
 self-incompatibility 1–7, 101–109  
 self-incompatibility locus 256–263  
 sex determination 292–297  
 sex-inducer proteins 8–12  
 sexuality *Allomyces* 311  
 S-gene product, stigmatic 3–4  
 signalling in self-incompatibility 6  
*Silene* 86–88, 292–297  
 S-locus glycoproteins 101–109  
 S-proteins, Solanaceae 256–263  
 sperms, microfilaments 89–100  
 spikelet culture, wheat 286–291  
 starch, in pollen 110–116  
 stereology, pollen grain 166  
 stigma, carbohydrate composition 49  
 stigmatic components 3  
 stigma receptivity 80  
 stress, pollen competition 128–130  
 structural relationships, generative–vegetative cells 170–175  
 synergid degeneration 151–155, 212  
 synergids 34–46, 206–213  
 synergids, organelle movement 161  
*Tradescantia* 91, 95  
 transformation, S-genes 101–109  
 transgenes, expression 104–105  
 transgenic plants 101–109  
*Triticum* 207–213, 247–255, 286–291  
*Tylosema* 298–303  
 vegetative cell, pollen grain 247–255  
 vegetative nucleus, surface 250  
 viability, pollen 265, 289  
*Vigna* 195–200  
 vigour, pollen 265  
*Volvox* 8–12  
 water influx, pollen 166–167  
*Wellwitschia* 275–279  
 wheat ovary, X-ray maps of element distribution 34–46, 208–210  
 Y-chromosome, marker 86–88  
*Zea mays* 224–226, 227–231

---

The editors wish to thank all external referees for their assistance in evaluation of manuscripts submitted especially

Li Yi-qin, Siena, G. Mulcahy — Bergamini, Amherst, E. Ottaviano, Milano,  
 E. Pierson, Siena, J. Schrauwen, Nijmegen, A. Tiezzi, Siena, G.A. Wyse, Amherst

as well as the assistance of Mrs. Ann Jenks Coupland at the editorial office.
